Tuesdays, Thursdays, 10:15-11:30 in Room G100 (SICL) Harrelson Hall

This course will cover the mechanics of converting data from whatever form it may arrive and preparing it for processing by statistical software. A substantial portion of this course will be spent in learning SAS programming, especially the DATA step. This class will regularly meet in SICL, and the computing facilities will permit regular hands-on activities.

As a Special Topics course, the grading will be on a Credit/NoCredit basis. Nonetheless, in order to assess your understanding and skills, I will assign homework and give quizzes. The aim of this course is mastery of the basic SAS tools at the level of the Base SAS Certification.
